# Introduction

Hello, in this book, I want to tell you about how to cope with Cancer. Cancer has caused millions of people die after chemotherapy process. There are lot of alternative to chemotherapy, alternative medication prove effective and safe for Cancer patient. But people are rarely aware of these alternative medication.

My mission is to popularize alternative medication for healing disease and symptoms including Cancer. People must know that Cancer is not genetic, Cancer is not caused by free radical either. Cancer is caused by Candida, and we can cure Candida naturally. I want to tell the world that we do not need chemotherapy to heal cancer. Anti fungal herb would eliminate Cancer and Tumor naturally and effective with low cost.

Content of this book are somewhat different in nature and serve a practical but comprehensive purpose.

Although several healing included here are written in concise, but actually it is comprehensive . My intent is that you can heal your symptoms or disease , you can solve your health problems.

The purpose of this book, then, is two-fold. First, I want to tell you about my Cancer story. Second, I want to motivate you that you can fight your Cancer.

Author

CJ VON BRAUN

# **What is Cancer? What is Tumor?**

You must know and you must learn the definition of several words in medicine.

1. Disease : An abnormal condition of a part, organ, or system of an organism resulting from various causes.
2. Condition : Existing circumstances of group of tissues that performs a specific function in the body.
3. Symptoms and Signs of Disease , signs are what a doctor sees, symptoms are what a patient experiences when they have certain disease.

**Diagnose of Cancer**

In most cases, doctors need to do a biopsy to diagnose cancer. A biopsy is a procedure in which the doctor removes a sample of tissue. A pathologist looks at the tissue under a microscope and runs other tests to see if the tissue is cancer.

Cancer is nearly always diagnosed by an expert who has looked at cell or tissue samples under a microscope. In some cases, tests done on the cells' proteins, DNA, and RNA can help tell doctors if there's cancer. These test results are very important when choosing the best treatment options.

What was exactly sought by the doctor using microscope? The answer is fungus or yeast. Cancer is a Yeast, says Dr Simoncini. Right, so Cancer, Leukemia is yeast of the body's blood-forming tissues, including the bone

marrow and the lymphatic system. So Leukemia is also yeast. The doctor would diagnose a cancer when they found yeast on patients tissue.

Yeast or fungus on your body are result of Polymorphism of bacteria. Every healthy humans cell contain healthy bacteria named endogenous retro virus, not dangerous bacteria can convert its form into different form. Bacteria can convert into virus, yeast like Candida even worm. In addition, those viruses, yeast like Candida can widespread elsewhere in your body. Yeast could widespread and cause many symptoms.

So what is Cancer ? Cancer is yeast. Cancer is nickname of yeast, it is just a nickname.

**How could yeast live inside our cell ?**

Cancer is yeast , Yeast is cancer. Human body is made of hundreds of billion cells. These cell contain bacteria that could change its form, intracellular bacteria could transform itself into yeast form. It's called human cell homeostasis. Yeast inside our cell could spread into other cell , they call it the process metastasis.

Our cell could live by process pyruvate into energy or Mg-ATP. But our cells need oxygen. Without oxygen, our cell must do internal fermentation by using lactate fermentation via Lactate dehydrogenase. Lactate fermentation occur in cytoplasm. In Lactate fermentation , our cell need NADH which the converted into NAD to produce Mg-ATP (energy).

But too much Lactate production which convert NADH into NAD would create imbalance between NADH and NAD. Too much Lactate production would deplete NADH. Lactate fermentation would not occur when our body lack of NADH.

Hence our body cell change its fermentation into Alcohol fermentation which convert Pyruvate into Acetaldehydes using Pyruvate Decarboxylase then Acetaldehydes into Acetic acid.

For that, our cell must transform its internal bacteria into yeast form. Yeast inside cell would produce energy via alcoholic fermentation.

When our body cell have oxygen, our body cell would transform its Intracellular yeast

into normal bacteria form using Autophagy or Apoptosis.

If our cell use Autophagy our cell would use AMPK which inhibit Mitosis.

If our cell use Apoptosis, our cell would do mitosis using MTOR mammalian target of rapamycin which inhibit Autophagy. After mitosis (cell cloning) there would be Apoptosis (cell death).

The BRCA1 tumor suppressor gene would use reactive oxygen species to induce lipid peroxide to execute Autophagy and Apoptosis.

Sometimes in the absence of the G1 checkpoint, mitotic catastrophe occurs in these p53-null cells predominantly as a result of mechanical disruption induced by centrosome

overduplication, and not as a consequence of a suicide signal.

## **How could we have Tumor**

Tumor is essentially hyperplasia, a drastic increase of cell quantity due to mitoptosis which followed by the failure of Apoptosis.

## **How could we heal Tumor ?**

We can heal Tumor using keto diet and coconut oil, olive oil , black seed oil (nigella sativa) which induce Autophagy.

Specifically, tumor suppressor genes that negatively regulate mTOR, such as PTEN, AMPK, LKB1, and TSC1/2 stimulate autophagy while, conversely, oncogenes that activate mTOR, such as class I PI3K, Ras, Rheb, and AKT, inhibit autophagy, suggesting

that autophagy is a tumor suppressor mechanism.

Consistent with this hypothesis, the inhibition of autophagy promotes oxidative stress, genomic instability, and tumorigenesis.

### **How does cancer cause death?**

Cancer is caused by an uninhibited growth of yeast inside cells that spread to other cell, or metastasis. Cancer or Yeast could exist in any cells of our body. Our body must repair its cell using Autophagy or Apoptosis, other other forms of self repair would be used , which is regulated necrosis (necroptosis, pyroptosis, ferroptosis). Regulated necrosis has its downside. Regulated necrosis would

kill yeast inside cell without replacing the death cell with new cell.

In Autophagy or Apoptosis, cell would be cloned , thus cell would be 2 cell. The bad cell would be death, the good new ones would stay alive. But in regulated necrosis, there won't be new cell. Cancer or yeast infected cell would be death.

When cancer or yeast live in a vital organ, huge quantity of vital organ death cell would destroy organ function and eventually can result in death. Heart death cell would decrease Heart volume, and cause death.

Cancer kills by invading key organs (like the intestines, lungs, brain, liver, and kidneys) and interfering with body functions that are necessary to live. Untreated cancer commonly causes death

# Cancer type

## List of Cancer

1. **Bladder cancer:** Bladder cancer occur when **Yeast or fungal** grow in the bladder. Yeast or Cancer usually begins in the lining of the bladder. The cancer which is a yeast infected cell could increase its cell quantity and infecting your bladder muscular .  
Cancer or yeast on bladder also would invade lymph nodes, other part of pelvis (create dysfunction on kidney , bowel even on liver and lungs.
2. **Blood cancer :** Blood cancers occur when **Yeast or fungal** spread on your blood, bone marrow and lymphatic system. There are three main groups of

blood cancer: Leukaemia ,Lymphoma  
Myeloma

**3. Bone cancer :** a malignant tumor grow on the bone and destroys healthy bone tissue. This occur when yeast or fungal grow on the bone. There are 2 types of Bone cancer , first primary and secondary bone cancer: primary bone cancer forms in the cells of the bone and secondary bone cancer occur elsewhere, eventually invading the bones.

**Bone cancer types:**

**a. benign bone tumors**

**include:**osteoma, osteoid ,osteoma, osteochondroma, osteoblastoma, enchondroma, giant cell tumor of

bone, aneurysmal bone cyst, fibrous dysplasia of bone

**b. Examples of malignant primary bone tumors include:**

**Multiple myeloma** is a blood cancer that may include one or more bone tumors. some bone cancers can be found in certain bones. There are cell tumors lie in the tailbone like teratomas and germ .

**Osteosarcoma** :Osteosarcoma is the most common type of bone cancer. It usually develops in children and young adults. Beside brain tumors and leukemia, osteosarcoma is another cancer which attack teenagers.

**Ewing sarcoma** : Ewing sarcoma cancer occur mostly on the thighbone pelvis or shinbone. it usually attack teenagers and young adults.

**Chondrosarcoma** :Chondrosarcoma usually develops in adults. It starts in the cartilage cells and moves on to the bone.

4. **Brain cancer** :Brain tumors are abnormal growths of Yeast in the brain cell.

**breast cancer** : Breast cancer occur mostly on women, and the second main cause of cancer death in women, after lung cancer. But Breast cancer can affect men too. Symptoms include a breast thickening , or breast lump, and some changes to the the nipple skin . What is

breast cancer? Breast cancer occur when Yeast or fungal grow on your breast.

**Ductal carcinoma:** This occur when yeast or fungal grow in the milk duct and is the most common type.

**Lobular carcinoma:** This starts when yeast or fungal grow in the lobules.

Invasive breast cancer is when yeast cells break out from inside the lobules or ducts and invade nearby tissue, increasing the chance of spreading to other parts of the body

**The symptoms of breast cancer :** an area of thickened tissue in the breast, or a lump in the breast or in an armpit. , armpits pain , breast pain , breast skin pitting , breast skin redness ,a rash

around or on one of the nipples , breast size or shape change, breast peeling.

Stay away from Cancer Surgery like Lumpectomy ,Mastectomy ,Sentinel node biopsy:

You can prevent breast cancer : avoiding alcohol consumption , following supercandida diet with plenty of fresh fruit and vegetables, getting enough exercise, stay away from antibiotics, contraceptive pill, stay away from any kind of drug and use herb instead.

Women should know that their options for breast-feeding has no relation with breast cancer, because breast cancer is yeast. Never ever trust the diagnosis

about your live surviving percentage. If your doctor said your life is only 1 day , 1 month , 1 year.

**5. cervical cancer :** Cervical cancer occur when yeast or fungal grow on the cervix. It is due to the yeast or fungal growth of cells that have the ability to invade or spread to other parts of the body. The symptoms may include abnormal vaginal bleeding, pelvic pain, or pain during sexual intercourse. Even though after sex bleeding are not usually serious, bleeding may be an indication of the existence of cervical cancer.

**6. colon cancer :** Colon cancer happens when yeast or fungal-caused tumorous growths develop in the large intestine. Yeast-caused cancer cells can grow and

invade healthy tissue nearby and throughout the body

**7. endometrial cancer : Endometrial cancer** is a type of **cancer** that begins when yeast or fungal grow on the uterus. The uterus is women organ which pear like shape with the hollow, in which fetal development occurs. Yeast or fungal-caused **Endometrial cancer** develop in cell layer which form the uterus lining (**endometrium**) . **uterine cancer** is another name of **Endometrial cancer** .

**8. esophageal cancer : Esophageal cancer** is a disease in which yeast or fungal grow on cells form in the tissues of the **esophagus**. The **esophagus** is a muscular tube that moves food and liquids from the throat to the stomach. The most common

types of **esophageal cancer** are squamous cell **carcinoma** and adenocarcinoma.

- 9. Leukemia** : Leukemia, also spelled leukaemia, is a group of cancers that usually which occur when yeast or fungal grow in the bone marrow and result in high numbers of abnormal white blood cells.

Leukemia patients white blood cells are not fully developed that's why it is called blasts or leukemia cells. Some Leukemia symptoms are tired , weakness, some bleeding and bruising problems, cold and, fever. These symptoms occur due to a lack of normal blood cells. Patients

was usually diagnosed after some bone marrow biopsy and blood tests.

**10. lung cancer**

**11. lymphoma cancer:** this type of cancer occur when systemic Candida fungal begins in infection-fighting cells of the immune system, called lymphocytes. Candida occur in these cells which are in the lymph nodes, spleen, thymus, bone marrow, and other parts of the body.

**12. melanoma :** also known as malignant **melanoma**, is a type of cancer which occur when yeast grow on the pigment-containing cells known as melanocytes. **Melanomas** cancer usually attack the skin but can sometimes rarely develop in the eyes , or mouth even on

intestines. In women melanoma usually exist on the legs, while in men they occur on the back.

**13.      mouth cancer :** Mouth cancer, or oral cancer, can occur when yeast grow anywhere in the mouth, on the surface of the tongue, the lips, inside the cheek, in the gums, in the roof and floor of the mouth, in the tonsils, and in the salivary glands.

**14.      ovarian cancer :** Ovarian cancer refers to any cancerous growth that occurs when yeast grow in the ovary. The majority of ovarian cancers arise from the epithelium (outer lining) of the ovary.

**15.      pancreatic cancer :** **Pancreatic cancer** is a disease in which yeast grow in the tissues of the **pancreas**. Pancreas gland lie near the stomach and exactly

locate before the spine. The **pancreas** secretes some hormone and digestive juices which function to control blood sugar.

**16. prostate cancer :** Prostate cancer is occur when yeast grow in prostate gland. In pelvis there is organ named The prostate gland , and only men has it, Prostate gland lie in the pelvis, next to the tube named urethra, urethra used for urination . So many men infected by yeast beside skin cancers, and prostate Cancer is men's number two of death cause cancer.

**17. stomach cancer :** Stomach cancer, also known as gastric cancer, is the accumulation of an abnormal (malignant,

cancerous) yeast cells that form a mass in a part of the stomach.

18.      **tongue cancer** Tongue cancer is a type of Candida fungal that grow in the front two-thirds of the tongue. Cancer that forms in the back one third of the tongue is considered a type of head and neck cancer. Tongue cancer usually develops in the squamous cells, the thin, flat cells that cover the surface of the tongue.
19.      **testicular cancer** : Testicular cancer is a disease which occur when yeast grow on testicular cells in one or both testicles. Men infected by this cancer are usually from 20- to 35-year-old . Testicular cancer has two kind of disease, seminomas cancer and nonseminomas cancer.

The symptoms of Testicular cancer are usually a lump or swelling in a testicle , pain on their testicular or some feeling of discomfort; increase size of testicular , pain in their back, abdomen, or groin..

20.      **throat cancer** : Throat cancer refers to yeast -caused tumors that develop in your throat (pharynx), voice box (larynx) or tonsils. Just image that throat is a muscular tube that start from nose (behind part) until neck. Throat cancer are likely to attack in the flat cells inside of your throat.

Your voice organ lie below your throat and your voice organ is also vulnerable to throat cancer.

21.      **thyroid cancer** Thyroid cancer occurs when yeast grow in the cells of the

thyroid — a gland lie at the base of your neck. Your thyroid secrete hormones which control your heart rhythm, your blood pressure, your body temperature and your body weight.

**As you see from the list all type of cancer are yeast.**

### **What is Leukemia?**

Leukemia, people also spelled it leukaemia, is a kind of cancers which begin in the bone marrow and result in high numbers of abnormal white blood cells. Leukemia symptoms may include bleeding and bruising problems, feeling tired, fever, and an increased risk of infections, which occur due to a deficiency of normal blood cells.

Just like all of other Cancer. Leukemia is yeast. To eliminate Leukemia, you must use method of yeast healing.

What cause Cancer?

Now you know that Cancer is yeast, but have you idea why yeast could exist in your organ cell like breast, brain nerve, heart, and several other organs?

### **What cause Cancer or yeast?**

Cancer or Yeast occur from conversion of your body healthy cells into yeast mode. Read the detail below.

Off course you know that both Tumor and Cancer is Candida , actually Cancer and tumor is worse forms of Candida . Milton

White,MD. believed that **cancer is a chronic, yeast** . He could then find yeast spores in all sample of cancer cell he checked.

Dr Tulio Simoncini said that Cancer is cause by a yeast, called Candida albicans. Many truth seeker doctors found yeast on Cancer. In 1999 Meinolf Karthaus, MD, after seeing three different patients with leukemia suddenly become healthy after receiving a triple anti yeas l drug for their fungal infections. In 1997 Mark Bielski also believed that leukemia, whether acute or chronic, is intimately associated with yeast like Candida.

Dr. Andrew Dannenberg, director of the Cancer Center at New York-Presbyterian Hospital/Weill Cornell Medical Center believe that, all cancer is caused by yeast , he said that at the annual international conference of the American Association for Cancer Research.

Yeast is found on Cancer patients body cell. It's a proof that Cancer and yeast is interlinked. Let me tell you that in each of your body cell , there is a nano bacterial DNA. And that bacterial DNA can convert into viral ,yeast ,protozoa , even can be a worm!

A French scientist ,Antoine Beschamp was able to prove that human healthy cell Bacterial DNA can convert into virus or Fungal like Candida , even convert into Worm. It's called Polymorphism of microbe theory which affirms that all micro flora can alter their form , and it's confirmed by many scientists that came after Beschamp, including Claude Bernard and **Gunther Enderlein**.

**Gunther Enderlein** made experiments to prove that , Enderlein found that that all micro flora on human body that live permanently in our bodies go through three stages of polymorphism:

The Primitive Stage (microbe)

The Middle Stage (bacteria)

The End Stage (yeast)

Your body need oxygen to process your food.  
Your body need hemoglobin to distribute

oxygen to all part of your body . If you have low hemoglobin level and you would lack of oxygen.

And if your body cell are shortage in oxygen, your body cell would use anaerobic. On anaerobic condition due to low hemoglobin level on blood, your body cell bacterial DNA can convert itself into viral even yeast form. So oxygen deficient cell could transform into Candida yeast form. Candida which is a yeast that can releases by-product toxins like ethanol, acetaldehydes and other toxins from your system, causing **nutrients deficiency**.

Yeast is a chronic health condition which can cause nutrients deficiency. Individuals that have nutrients deficiency experienced new sensitivities, allergies or intolerances to a

variety of foods. These foods include dairy, eggs, corn and gluten.

## **What is root Cause of Tumor, Cancer aka yeast ?**

Nutrition deficiency is the root cause of all disease including yeast . Malnutrition is cause of Yeast . Candida is the most common type of yeast infection found in human.

Unhealthy diet, psychological stress and toxins can induce yeast.

Cancer is a mutation of your cells which convert into yeast

Cancer is yeast are caused by toxins like carcinogenic chemicals posing as additives, preservatives and “excipients” in most

conventional food, genetically modified foods, allopathic medicine, vaccines, flu shots, tap water, personal care products, household cleaners, gardening products, candles, air fresheners, pet care products, and the list goes on.

Prescription drugs, , chemotherapy and radiation can induce yeast or cancer cell growth.

If you are a “regular” consumer of prescription drugs for anxiety, pain, depression, inflammation, arthritis, fibromyalgia, heart disease, high cholesterol and diabetes, once again you are killing your self.

Remember Fluoride does not prevent cavities or make your teeth stronger. Vaccines do not “build” immunity.

Artificial sweeteners do not help you lose weight. Prescription drugs do not cure health problems, they only treat the symptoms and the pain. Stay organic.

Here is the detail:

### **1. Broad-Spectrum drug like Antibiotics, Antacid etc**

Do you know that synthetic drug would deplete your nutrition. Drug could deplete your nutrition deposit and induce certain nutrient deficiency. You consumed prescribed drug to heal your disease or symptoms, but in fact the drug could creates another bigger problem, nutrition deficiency which is root cause of all disease of living creature.

You consumed antibiotic drug to kill virus to heal your disease. The problem is your

symptoms are caused by malnutrition not by virus. All you have to do is to strengthening your immunity by supplying nutrition to your body.

Long period (more than 3 day) of drug using would deplete your nutrition and malnutrition

Just like antibiotics, birth control pills in and of themselves can cause a yeast infection or Birth control pills instigate yeast or Candida by depleting your body mineral deposit like iron, sulphur, Magnesium, Zinc .

## **2. Unhealthy diet**

An unhealthy diet contains too much refined carbohydrates. Unhealthy diets also often contain too many calories -- often too little nutrition -- and too few fruits, vegetables and whole grains. Unhealthy diet contain toxin like mercury and synthetic food preservation.

Unhealthy diet do not supply daily need of vitamins and minerals from food sources. A poor diet can make you more susceptible to catching the common cold and many other symptoms.

Unhealthy diet can cause deficiency of nutrition, hence it would lower hemoglobin and Lactoferrin level on your body, induce Candida and create Cancer and Tumors. You need Magnesium and iron for your blood, high sugar consumption without enough minerals like magnesium would lower Lactoferrin , and Hemoglobin. That could cause Candida-induced Cancer.

### **3. Stress**

Stress also can deplete your nutrition, stress lower magnesium, zinc some other mineral deposit, mineral deficiency would create yeast on tissue.

#### **4. Toxins like Alcohol , Air pollution and Metal toxins like mercury and lead**

If your body contain metal toxins like , ethanol from alcoholic drink ,acetaldehydes from air pollution, from mercury and lead. Your body would try to excrete metal toxins using Gluthatione and Methionine synthesis process.

And that process would take nutrition like magnesium and zinc. A lot of minerals involved in that process, hence that would deplete your mineral deposit. Depleted nutrition deposit would induce polymorphism, hence create yeast on tissue.

**Conclusion:** Physical and psychological stress ,Broad-Spectrum drug like Birth Control Pills Antibiotics, Antacid etc, Toxins like Alcohol , Air pollution and Metal toxins like mercury

and lead would cause deficiency of nutrition, deficiency of nutrition would cause yea

### **Several myths on Cancer:**

**LIE #1) Myth that Cancer and Tumor is caused by genetic inheritance.**

TRUTH: Every disease and symptoms are caused by toxins or nutrition deficiency including Cancer . Cancer and Tumor are yeast . There is no such thing as "genetic inheritance" disease without toxins or nutrition deficiency causality

**LIE #2) Myths that there is no cure for cancer.**

TRUTH: There are thousands of cures for cancer that already exist in the natural world and are being used but people rarely realize that. And I write this book to let you knows

how to cure cancer! You just need to apply this book content.

### **LIE #3) Myth that Chemotherapy treats cancer.**

TRUTH: Chemotherapy would not heal your Cancer. The decrease of cancer tumors isn't caused by chemotherapy "treatment" at all, the decrease of tumor can be only caused by herb consumed the patients.

Some doctor or hospital give frankincense oil or black seed to their patients while follow chemotherapy. When the patients cured. The patient never realize the fact that herb is the secret of healing.

And you must eliminate fungus or Candida completely to uproot your cancer tumor stem cells, the tumor just grows back. Remember chemotherapy would deplete your immunity, chemotherapy would worsen your cancer.

You must heal yeast because cancer is yeast, and it tends to return in multiple organs within 12 - 24 months.

**LIE #4) Myth that there's no such thing as an anti-cancer food or herb.**

TRUTH: Best anti-cancer medicines have been natural food and herb since the beginning of life on our planet. There are literally thousands of anti-cancer plant nutrients found in the fresh foods at every grocery store. But people rarely know the anti-cancer properties of these powerful foods (like olive oil and coconut oil) .

**LIE #5) Myth that the chemicals used in personal care products would not cause cancer.**

**TRUTH:** Many personal care products are loaded with cancer-causing toxic chemicals, which induce toxicity which then lead to Cancer, toxins like carcinogens and fragrance chemicals which are capable of causing Cancer.

**LIE #6) Myth that Pesticides and herbicides don't cause cancer, either.**

**TRUTH:** Cancer is yeast , yeast is caused by toxins like Pesticides. By definition, Pesticides are deadly, or they wouldn't be used as pesticides. The world's most popular herbicide, glyphosate is toxic substance

**LIE #7) Myth that 4 stage Cancer diagnosis is always true and accurate.**

**TRUTH:** patient always believed that they only had several months to live. They believe that they would die absolutely if they are in 4 stage Cancer ,that's totally LIE.

Do you know that 4 stage Cancer diagnoses are frequently exaggerated or fabricated out of thin air. You still can heal your Cancer even in your 4 stage, not with chemotherapy but with powerful herb and diet.

**LIE #8) Cancer is an "enemy" out of nowhere that has "invaded" your body, and it should be eliminated by attacking the body with chemical drug.**

TRUTH: Cancer is cell of your body which convert into yeast. Every living cell on your body contains Bacterial DNA which can convert into Virus , or into yeast. Cancer is actually a kind of yeast.

Yeast which just develops on your body's own cells out of control. Please do not makes a huge mistake in treating cancer . Do not bombard your body with chemicals to try to eradicate the cancer. But the cancer is your

body's own cells, so to kill the cancer, you need herb!

**LIE #9) Myth that you must cut your breast to prevents breast cancer.**

TRUTH: Eliminate your body parts that infected by cancer is something that you must, you can heal your Cancer without cut your breast. Never ever follow your cancer doctors advice to cut off your breast to heal your cancer? Stay away from that Cancer doctor that ask you to cut your breast. Use herb to heal your breast Cancer.

**LIE #10) Myth that Sunlight causes skin cancer (and sunscreen prevents it).**

TRUTH: Go to beach , expose your skin without sunscreen. You do not need sunscreen , you should use sun screen to avoid skin

cancer. Sunlight would not cause skin cancer. Skin Cancer is yeast or fungus. Sunlight in the mid of the day even PREVENTS cancer by generating vitamin D in your skin.

Most people are horribly vitamin D deficient, you need vitamin D and the best source of vitamin D is Sunlight Exposure, you need vitamin D to fight cancer and tumor. Vitamin D is such a powerful nutrient that it alone has been shown to prevent more than 80% of all cancers

**LIE #11) Myth that you can only cure Cancer if you spent a lot of money in expensive medication.**

TRUTH: We do not need too much money to heal cancer. Herb and diet can heal Cancer without spending million. So you do not need million to heal Cancer, just few dollar in fact.

Just buy Cheap herb would heal your Cancer and Tumor.

**LIE #12) Myth that Chemotherapy cancer treatments can heal Cancer.**

TRUTH: The real scientific evidence shows that chemotherapy never works . For the other 98% of patients receiving chemo, it's just a deadly poison that damages their heart, liver, brain and kidneys. If there's 2% of patients can be healed , the healing is not caused by Chemotherapy, but the healing because the patients also drink herb like Frankincense, Black seed, Turmeric, or Oregano.

People rarely realize the facts that 2% patients of cancer which underwent chemotherapy had been heal actually by herb not by chemotherapy.

**LIE #12) Myth that there is no link between diet and cancer.**

**TRUTH:** Diet can heal your Cancer , what you eat is the #1 determining factor of whether you get cancer or avoid it. foods that you eat everyday have significant , vital and real influence on cancer: either preventing it or causing it. Processed food and beverage, alcoholic drink would deplete nutrition hence slowly would lead to cancer.

**LIE #13) Myth that Synthetic drug product would not cause Cancer.**

**TRUTH:** You must realized that synthetic prescribed or over the counter drug would deplete nutrition and lower immunity . Low immunity is the root cause of Cancer .

## **Conventional Cancer Treatment**

I know there are several conventional treatment of Cancer like Chemotherapy, Radiation, and Surgery:

## **Chemotherapy**

*Why chemotherapy kill you faster than cancer ?*

*Why you must say no to chemotherapy and why Chemotherapy will not heal your Tumor and Cancer*

Cancer medication of chemotherapy has caused million of cancer patients death.

We are bombarded us with propaganda to keep us believe that cancer is genetic and irreversible or incurable: Wrong! Cancer and Tumor can be prevented and Cancer and Tumor can even be reversed.

If you or your family have been diagnosed with cancer or suspected to have cancer, then you must realize that you to learn how to heal your Cancer or Tumor yourself . You must

stay away from Cancer conventional Cancer medication like chemotherapy.

*Stay away from chemotherapy or radiation therapy that you don't even need!*

Trust me that 75% of physicians in the world refuse chemotherapy for themselves.

Of course you know that cancer chemotherapy can make you lose your hair. Fingers and toes may become painful or numb. And chemotherapy would destroy your immune system, especially the white blood cells, so did you know that chemo would kills you?

Other websites may tell you that chemo is dangerous. But this report may be the first time that anyone has shown the general public that chemo kills, with reference to peer-reviewed studies.

## **Is Chemo Really “Palliative”?**

Palliation means relief of pain or other symptoms, without dealing with the cause of the condition. Mainstream medicine is not for healing but just for relieving.

The word derives from pallium, which is Latin for cloak. Many studies refer to the chemo given at the end of life as “palliative treatment.” Chemotherapy is meant to hide symptoms of the disease itself. Do you realize that before die, every cancer patient which undergo chemotherapy would appear healthy. The truth is cancer felt better after chemotherapy due to their symptoms were only temporarily relieved.

Chemotherapy is more likely to kill than to help.“

According to Dana-Farber Cancer Center scientists:

“Patients with cancer who die soon after starting chemotherapy incur costs of treatment without the benefits....These patients experience **burdensome symptoms** without many of the potential benefits of chemotherapy.”

In fact, mostly patients die as a direct result of the chemo itself.

In 2015, Prof. Holly Prigerson, along with 11 co-authors, published an important paper on the topic. They concluded that chemo given to improve symptoms actually worsened health condition of patients who

received it. Patients who had a good performance status after chemo would be sick. Yes , the chemo that was meant to give them a relief, but worsen condition of patients, eventually killed them off sooner.

Prigerson is a professor at Weil Cornell Medical College and Harvard Medical School, and her co-authors are all professors at Columbia, Yale, Duke, Michigan, etc. Her report in JAMA Oncology created a bit of a stir in medical circles. To date, it has been referenced 200+ times in other journal articles (an indication of its impact).

In this paper, they spoke in unusually direct terms for academics:

The quality of life “in patients with end-stage cancer is not improved, and can be harmed, by

chemotherapy use near death, even in patients with good performance status.”

The Telegraph, one of Britain’s “big three quality newspapers,” uncovered facts about chemo deaths at various British hospitals.

“Chemotherapy warning as hundreds die from cancer-fighting drugs”

Their science editor, Sarah Knapton, then wrote a lead paragraph that you are unlikely to read in any U.S. paper:

“Patients should be warned about the dangers of chemotherapy after research showed that cancer drugs are killing up to 50% of patients in some hospitals.”

Many people even experts have realized that chemotherapy actually causes cancer to

spread throughout the body. So patient died from chemotherapy not cancer.

## Radiation

With human advances in technology, squashing cancer would be like reinventing the wheel. Actually, cancer are not a nightmare. But 1.7 million new cancer diagnoses and over 595,000 deaths. For women, one of the greatest threats is breast cancer, which claims the lives of over 200,000 women every year.

Sorry, the diagnose are based on pseudoscience. So pseudoscience diagnose would result in pseudoscience based treatment.

A good example of this is radiation therapy.

## **How radiation works**

Mainstream medicine believer would believe that “Attending a radiation therapy centre helps kill cancer cells that are dividing”

But never forget that it also kill cells of normal tissues. Hence , it could kill patients.

Radiation therapy isn't just a toxic treatment to cancer cells. It's a dangerous poison to the cells of the entire body, and it can damage parts of the body outside of the area directly treated with radiation. This damage takes many different forms.

### **■ Nerve and tissue damage**

- For women with breast cancer, radiation-induced inflammation causes various problems. Lymphoedema — swelling of the arm.
- Induce painful changes in the movement and feeling of the treated chest, shoulder, and arm of the treated area.
- It could weaken immunity
- Decrease Infertility. The toxic effects of radiation pose great danger to the eggs within a female's uterus.
- Bone damage

Hence I do not recommend you to have radiation for your cancer.

## Surgery

If you want to have surgery your biggest concern should be the final outcome--what would you have after your surgery is completed?

You must prepare for your surgery, which means understanding the risks you face and how to decrease those risks, is key to a great recovery and final result.

Here are several risk of surgery

- Death Due to Surgery ,surgery are risky. It could take your life
- Delayed Healing After Surgery
- Poor Results After Surgery
- Scarring After Surgery
- Swelling and Bruising After Surgery

I do not recommend surgery for your cancer ,  
and never ever follow a surgery for breast  
cancer.

### **low Carbohydrate High Fibre diet as alternative Cancer healing**

*Organic low Carbohydrate High Fibre diet is  
safest method for healing Cancer & Tumor*

Cancer is yeast, my first experiment in self  
healing of cancer did not succeed because I  
did not starve my cancer or my yeast using  
low Carbohydrate High Fibre mode. One of  
biggest mistakes that I made is I did not  
decrease my consumption of carbohydrate like  
glucose, sucrose, fructose. Cancer or yeast  
need glucose to grow.

If we avoid sugar like glucose, automatically we would kill our yeast or cancer cell. At least stop the growth of yeast or cancer cell. So Low Carbohydrate High Fibre diet is a must in healing yeast or Cancer.

If you have cancer, you must follow strict Low Carbohydrate High Fibre diet to eliminate your yeast.

If you've been on the Low Carbohydrate High Fibre Diet or any kind of low carbohydrate diet for you want to heal your disease like Cancer, Candida, Leukemia and Tumor.

You want to heal your Cancer, Tumor. Even if you want to lose your weight, you want to have more energy, you want to have clearer head, you want to have a better sleep? You got a weight gain, you got a stiff neck, fatigue, cough, headaches, brain fog, heart

palpitation, nausea, depression, insomnia, diarrhea constipation and many other disease.

If you want to heal Cancer, Candida, Tumor, you must follow Low Carbohydrate High Fibre Diet.

Low Carbohydrate High Fibre Diet and any Low Carbohydrate diet would be best for healing Cancer and Tumor naturally, permanently and without risk.

Tumor , Cancer which are actually yeast can not feed on both Fibres

Furthermore, since Fibres are not food source for yeast, hence would heal your Cancer and Tumor.

Yeast cell like Tumor and Cancer can feeds glucose only.

## **High Carb diet would worsen Cancer and Tumor**

But remember! Do not eat high-carb, since any extra glucose will just be food for the yeast, just follow strictly Low Carbohydrate High Fibre diet.

## **Benefits of a Low Carbohydrate High Fibre Diet**

There are many benefits that come with being on low Carbohydrate High Fibre: you can have weight loss, you can increase your energy levels, you can heal your Cancer . Most anyone can safely benefit from eating a low-carb, high-fat diet. Below, several benefits you can receive from a Low Carbohydrate High Fibre diet.

## **Weight Loss**

If you follow the Low Carbohydrate High Fibre diet, you essentially uses your body fat as an energy source – so there are obvious weight loss benefits. On low Carbohydrate High Fibre, your insulin (the fat storing hormone) levels drop drastically which turns your body into a fat burning machine.

Trust me, based on many people experience , the Low Carbohydrate High Fibre diet has shown better results compared to low-fat and high-carb diets; even in the long term.

## **Control Blood Sugar**

low Carbohydrate High Fibre diet naturally lowers blood sugar levels due to the type of foods you eat. Studies even show that the Low Carbohydrate High Fibre diet is a more effective way to heal diabetes compared to low-calorie diets.

### **Increase concentration**

Many people use the Low Carbohydrate High Fibre diet specifically for the increased mental performance.

If you increase your intake of fatty acids can have impacting benefits to our brain's function.

### **Increased Energy & Normalized Hunger**

By giving your body a better and more reliable energy source, you will feel more energized

during the day. Fats are shown to be the most effective molecule to burn as fuel.

On top of that, fat is naturally more satisfying and ends up leaving us in a satiated (“full”) state for longer.

## **What to Eat on a low Carbohydrate High Fibre Diet?**

To start a low Carbohydrate High Fibre diet, you must create a plan. The more restrictive you are on your carbohydrates (less than 15g per day), the faster you will enter low Carbohydrate High Fibre mode.

You must keep your carbohydrates limited, coming mostly from vegetables, nuts, and dairy.

### **Do Not Eat**

- Grains – wheat, corn, rice, cereal, etc.
- Sugar – table sugar, brown sugar, honey, agave, maple syrup, etc.
- Fruit – apples, bananas, oranges, etc.
- Tubers – potato, yams, etc.

### **Do Eat**

- Meats – fish, beef, lamb, poultry, eggs, etc.
- Leafy Greens – spinach, kale, etc.

- Above ground vegetables – broccoli, cauliflower, etc.
- High Fat Dairy – hard cheeses, high fat cream, butter, etc.
- Nuts and seeds – macadamias, walnuts, sunflower seeds, etc.
- Avocado and berries – raspberries, blackberries, and other low glycemic impact berries
- Sweeteners – stevia, erythritol, monk fruit, and other low-carb sweeteners >
- Other fats – coconut oil, high-fat salad dressing, saturated fats, etc.

don't forget that low Carbohydrate High Fibre is high in fibre, moderate in protein, and very low in carb. Your nutrient intake should

be something around 70% fibre, 25% protein, and 5% carbohydrate.

Typically, anywhere between 20-30g of net carbs is recommended for everyday dieting – but the lower you keep your carbohydrate intake and glucose levels, the better the overall results will be. \

High Protein and high carb must be avoided I recommend keeping total carbs below 35g and net carbs below 25g (ideally, below 20g).

If you want to crave for food throughout the day, you can snack on nuts, seeds, cheeses, or peanut butter to curb your appetite.

Vegetables on a Low Carbohydrate High Fibre Diet

Dark green and leafy is always the best choice for vegetables. Most of your meals should be a protein with vegetables, hence an extra side of fibre. Chicken breast basted in olive oil, with broccoli and cheese. Steak topped with a knob of butter, and a side of spinach sauteed in olive oil.

If you're still confused about what a net carb is, don't worry – I'll explain further. Let's say for example you want to eat some broccoli (1 cup) – seriously my favorite and most delicious vegetable out there.

There are a total of 6g carbohydrates in 1 cup.

There's also 2g of fiber in 1 cup.

So, we take the 6g (total carbs) and subtract the 2g (dietary fiber).

This will give us our net carbs of 4g.

If Are you a vegetarian or vegan and want to go on a Low Carbohydrate High Fibre diet? It's still possible.

### **Coconut oil as a natural method**

Coconut oil is most powerful oil to cure cancer , that because coconut oil contain Lauric Acid.

Lauric acid (LA), which is a saturated MCFA with 12 carbon atoms and the primary fatty acid of coconut oil, has been associated with certain health benefits of coconut oil intake.

Study had proven that lauric acid from coconut oil inhibits cancer cell growth without affecting healthy cells.

researchers from the Department of Pharmacy, Health and Nutritional Sciences, at the University of Calabria in Rende, Italy, and

from the Department of Health Sciences at the University Magna Graecia in Catanzaro, Italy published study on cancer , said that the anti-cancer activity of lauric acid, the main fatty acid found in coconut oil.

Even though U.S pharmaceutical industry orchestrated black campaign against coconut oil, buy research mainly outside the U.S. continues to show how healthy coconut oil can be, dispelling the common saturated-fat-is-bad myth still being promoted in the U.S.

The study title is: The lauric acid-activated signaling prompts apoptosis in cancer cells, and it was published in the journal Cell Death Recovery.

The study looked at the effects of lauric acid in both breast cancer and colon cancer:

The saturated medium-chain fatty-acid lauric acid (LA) has been associated to certain health-promoting benefits of coconut oil intake, including the improvement of the quality of life in breast cancer patients .

As it concerns the potential to hamper tumor growth, LA was shown to elicit inhibitory effects only in colon cancer cells. Here, we provide novel insights regarding the molecular mechanisms through which LA triggers anti proliferative and pro-apoptotic effects in both breast and endometrial cancer cells.

Coconut oil is nature's richest source of lauric acid, by far, comprising almost 50% of the fatty acids in coconut oil. Human breast milk comes in a distant second at around 6% lauric acid.

### **Best type of Coconut oil to consume**

Choose organic and cold pressed virgin coconut oil.

### **Black seed oil is better combined with coconut oil and olive oil**

But the downside is coconut oil is short of nutrition. So I prefer to combine olive oil, black seed oil (*nigella sativa*), and coconut oil. The reason is that black seed oil contain a lot of nutrition like mineral and proteins.

## **How I could have cancer?**

You already know that , Cancer is actually nickname of yeast. The doctors would diagnose your yeast on your body as Cancer, when your yeast has produce create certain symptoms your doctor would diagnose that you have Cancer. Cancer is just a label, you have symptoms of Brain Cancer, they check your brain tissue via MRI or biopsy. If they find something on your tissue cell, they would make a diagnose. But there is missing link that patients realize. How can we have that Cancer ? Your doctor would tell you that it's genetic or inheritance.

Trust me it's not genetic, Cancer on your tissue are yeast , just like scabies , and ringworm. But when you have Cancer, the

yeast grow on inside your tissue, so you can see it. But yes Cancer is yeast.

And you also already know that Cancer or yeast can grow on your body tissue because nutrition deficiency induced by toxins, unhealthy diet or stress. Toxins like prescribed and Vaccine are main cause of Cancer or yeast.

Before that I want to tell you about symptoms of Brain Cancer

Here are several symptoms of brain cancer

- Headaches, which may be severe and worsen with activity or in the early morning

- **Seizures.** People may experience different types of seizures. Motor seizures, also called convulsions, are sudden involuntary movements of a person's muscles.

Here are several symptoms of Schizophrenia:

**Hallucinations.** I could hear, see, smell, or feel things no one else does. The types of hallucinations in schizophrenia include:

- **Auditory.** I often heard voices in my head. They might be angry or urgent and demand that they do things. It can sound like one voice or many. They might whisper, murmur, or be angry and demanding.
- **Visual.** I frequently saw lights, objects, people, or patterns. Often it's loved ones or friends who are no longer alive. They may

also have trouble with depth perception and distance.

- Olfactory and gustatory. This can include good and bad smells and tastes. Sometimes I smell something that I can not see what things that smell.

My doctor diagnosed me with schizophrenia, based solely on symptoms that I have. They prescribed me drug, they call it genetic or inheritance.

In fact it's not genetic, it's not inheritance. Never ever trust that diagnose.

My doctor diagnosed me that I have ADHD, they said genetic or inheritance.

**ADHD, Schizophrenia , and Cancer are fictitious disease**

“ADHD is a prime example of a fictitious disease.”

These were the words of Leon Eisenberg, the “scientific father of ADHD (Attention Deficit Hyperactivity Disorder),” in his last interview before his death.

ADHD and Schizophrenia symptoms are cause by yeast on brain.

Cancer is yeast, and yeast on the brain would make you diagnosed Cancer. Trust me it's not genetic.

**How I could have Brain Cancer and Schizophrenia?**

I could have brain cancer , or brain yeast and schizophrenia , because of prescribed drug that for treatment of my hepatitis B.

When I was 17 , I was diagnosed hepatitis B. I underwent treatment on hospital for 10 days. They gave drugs, they still prescribed me antibiotics even after few month.

After consuming prescribed drugs like antibiotics for few month, I felt many other symptoms, like chronic fatigue (I could not run for more than 200 meter anymore, because I always wanted to vomit , if I tried to do so. I frequently heard hallucination

I also felt decreased ability to focus after consuming prescribed drug of my hepatitis B treatment. Yes prescribed drugs are toxins.

So after hepatitis b “treatment” or should I call it “murder therapy”, I felt all these symptoms of Brain cancer, ADHD , and Schizophrenia. I always wanted to debate doctors that blame it on genetic factor. Genetics factor are totally myths.

I believe doctors mostly did not realize that, and I believe medicine curriculum are fictive curriculum.

My conclusion my brain cancer or brain yeast, as well as ADHD and schizophrenia were caused by prescribed drug.

My total distrust to mainstream medicine made me to decide to heal my self using herbal healing.

## **How Mainstream Medication like Prescribed Drug induce Cancer**

Cancer are not genetic.

Cancer is yeast or fungus which grow when you have nutrition deficiency. Drug like prescribed drug and over the counter drug would deplete nutrition from your body.

You could have drug-induced nutrient depletion after consuming all kind of drug including prescription drug, medications deplete, block absorption, increase excretion, or increase utilization of nutrients resulting in nutrient deficiency.

Most medications would deplete nutrients contributing to side effects, poor tolerability, & sometimes discontinuation.

Many medications can cause nutrient deficiencies.

Nutrient deficiencies can be mistaken for symptoms of disease.

Drug-induced nutrient depletion and deficiency can be addressed with dietary modifications and the use of safe, quality supplements.

But most important thing is that you must avoid drug at all cost.

Medications would disrupt the balance of nutrition deposit that can impact your overall nutritional status and health.

Drug-Induced Nutrient Depletion.

Prescription medications are supposed to help us, but did you know that medications you take can cause nutrient deficiencies?

So prescribed drug consumption is suicidal acts.

Most medications have the potential to impact your nutritional needs by either changing the way your body absorbs, metabolizes, or excretes nutrients. The depletion of nutrients contribute to some of the adverse reactions and intolerances that people experience after using medications.

Nutritional deficiencies can be mistaken for symptoms of a disease process – for example, considering the following scenario:

Many medications for diabetes can deplete Vitamin B12

Symptoms of B12 deficiency include tingling sensations in fingers and toes

Tingling sensations can be mistaken for neuropathy – a common complication of diabetes

Thinking you are experiencing neuropathy, a doctor may choose to add another medication rather than addressing the low B12 levels that are actually causing the problem.

Consuming drug could lead to even more problems down the road?

But, with dietary modifications and the use of safe quality supplements, it can be relatively easy to address drug-induced nutrient depletion and avoid the negative effects associated with them.

### Common Drug-Induced Nutrient Depletions

The list of medications that deplete nutrients is very long – actually all drug are poison, and consuming them would suicidal acts. So instead You only focus on a couple of the key nutrients most commonly depleted and classes of drugs that are most commonly associated with nutrient depletion. This list is by no means all inclusive.

Acetylcysteine (NAC) / glutathione

N-acetyl-L-Cysteine (NAC) is needed for the liver to produce glutathione – one of the body's most important detoxifying compounds. It is required for the metabolism and/or excretion of over 50% of prescription medications. It is especially important for drugs metabolized by the liver – in fact if you take too much acetaminophen, the only way to protect the liver from damage is with NAC.

Of particular note, NAC and glutathione can be depleted by acid reducers, pain medications, acetaminophen, antibiotics, tricyclic antidepressants, antiviral medications, alcohol, and nicotine.

Note that thiamine and vitamin C are required to produce glutathione so deficiency in those nutrients can also deplete glutathione.

Acetylcysteine is a key component found in Olivamine because of its important role in supporting antioxidant and detoxification processes in the body. The highest dose in the Olivamine® supplement line is provided by ImmuneHealth.

### Vitamin B12 (cobalamin)

Important for the proper formation of blood, brain, and nerve cells, B12 can be depleted by antibiotics, diabetes medications, cholesterol medications, and diuretics.

Vitamin B12 absorption requires adequate acidity (low pH) in the stomach, so antacids and acid reducers that raise the pH of the stomach can significantly impact B12 absorption.

Vitamin B12 is included in Olivamine® MultiVitamin, BrainHealth, EnergyBoost, and CalmMind supplements.

### Coenzyme Q10 (CoQ10)

CoQ10 is a vital cellular antioxidant required for production of energy within the cell. It is depleted by blood pressure medications, diabetes medications, cholesterol medications

(especially statins), acid reducers, antibiotics, antidepressants, and more.

The organs most dependent on CoQ10 are also those most affected by deficiencies and include skeletal muscles, heart, liver, kidneys, brain, and retinas.

Pinnaclife provides 50 mg of CoQ10 in every serving of Olivamine® MultiVitamin.

## Folate

Like B12, folate is essential for the proper formation of blood, brain, and nerve cells plus more. It is depleted by acid reducers, pain medications, antibiotics, seizure medications,

NSAIDs, blood pressure medications, steroids, diabetes medications, and hormone replacement / oral contraceptives.

Pinnaclife uses the natural methylated form of folate (5MTHF) in Olivamine® MultiVitamin and BrainHealth.

## Vitamin B6

B6 has a diverse role throughout the body and may be required for hundreds of enzyme reactions. Vitamin B6 is depleted by antibiotics, diuretics, antidepressants, and acid-reducers.

Vitamin B6 is an essential ingredient in Olivamine®, therefore included in all PinnacLife Olivamine products.

## Magnesium

Magnesium is known to be required for over 300 biochemical reactions in the body, so deficiency can impact the entire body.

Deficiency is common and may be worsened by people using acid reducers, antibiotics, diuretics, antivirals, blood pressure medications, cholesterol medications, steroids, hormone replacement / oral contraceptives, immuno suppressants, excessive calcium, alcohol, and coffee.

Absorbable forms of magnesium are included in Olivamine® VitalBoost, SleepHealth, CalmMind, BrainHealth, and JointHealth supplements.

## Melatonin

Your body produces melatonin in response to darkness to help regulate your sleep cycle (circadian rhythm) and healthy REM sleep, but production appears to be decreased in people using acid blockers, pain medications / NSAIDs, anxiety medications, antidepressants, blood pressure drugs, and hypnotic sleep medications.

Also note that vitamins B1, B3, B6, calcium, and magnesium are all required by the body to produce melatonin, so deficiency in those nutrients can contribute to decreased melatonin production and disruption of natural sleep.

Each serving of Olivamine® SleepHealth provides 2 mg of melatonin, plus Vitamins B3, B6, and Magnesium.

## Disruption of Intestinal Microflora

Your intestinal bacteria (probiotics) are essential for overall health because they help you digest your foods, absorb nutrients, boost your immune system, reduce inflammation, and much more.

Many foods and medications can disrupt the balance – but some of the top offenders include antibiotics and acid reducing medications.

If you use these medications, you can be certain that they are impacting the balance of nutrition deposit in your body which can greatly impact your overall nutritional status and health.

## **My Cancer self healing**

For several years, I have been suffering with a type of brain cancer.

My frontal lobe and hippocampus have a lesion . It felt painful.

The brain lesion continued to grow, and over the years it increase its size. Not only did it grow wider, but it grew higher as well. Unfortunately, it took this long before I decided to heal my self.

My brain Cancer created symptoms like Schizophrenia and ADHD. I've done intensive and extensive research to find several method to heal my self. I found several methods. Then I tried it for healing my own Cancer.

I used black seed oil, I consumed black seed oil pills for almost 1 years. I swallow between 15 to 100 pills of black seed oils everyday for almost a year.

Well it worked, my schizophrenia and ADHD symptoms decrease 80%. But my Cancer or yeast on brain still exist. I managed to decrease my chronic fatigue a little. But not fully recovered.

## Taking Matters Into Our Own Hands

I decide to research about self healing of Cancer , I researched everything I could about it, including natural treatments. I recalled reading some articles about how black seed , has a high success rate with various types of cancers, so I looked into the topical and oral

use of black seed oil on my brain cancer. Surprisingly, I found quite a few personal testimonies from people who had healed a cancer completely, using just black seed oil. Cancer cannot thrive with black seed oil.

I almost had my brain cancer removed surgically twice more before I finally try the black seed oil treatment. And then the black seed oil treatment began.

I modified the time interval in using black seed oil ,instead of twice a day, I drank black seed oil, each at least 2 tablespoon. I did not mix black seed oil (a teaspoon of each) with food or drink , I also applied to the affected area. The results were truly astonishing.

Please keep in mind that, I drink black seed oil , it's organic one.

I also applied the black seed oil to the affected area. I gently slathered the area with the paste and let it remain there for as long as possible. Then I drank it.

I aimed for six applications a day for the first week, and ten for the second week moving forward.

What We All Learned From This Experience

Looking back at the start of this whole experience, I realize that I was just as skeptical as most people with regards to a successful

treatment that costs only a few dollars. I completely understand why a simple solution like black seed oil would be cast aside in favour of a more ‘mainstream’ treatment.

While I am by no means completely against mainstream or allopathic medicine, it is my opinion that we have been heavily conditioned by the medical industry to believe that we have absolutely no power over our own physical and mental health.

I can’t stress enough that this is simply untrue.

Throughout my cancer healing, I had experienced firsthand how effective an

alternative treatment can be. Not only is it effective, but it is affordable, safe, and free of side effects. Needless to say, I write this because also want to change public opinion on mainstream/allopathic medicine .

I hope you are going through a similar experience, and could can comprehend that the power is in your hands to heal your selves. No one is going to spoon-feed us the truth about how we can heal using simple and affordable methods — especially not the medical industry. We must do our own research and reclaim our healing power.

I underwent CT Scan to check my brain cancer. The doctor said it's genetic.

I don't believe that it's genetic, then I am right.

Not too long after the CT Scan , I received the result, it seemed , the doctor said the CT Scan showed that ***I have Brain lesions***. Brain lesion occur because yeast or cancer grow on my brain cell.

### My Conclusion

For cancer self healing:

- Follow keto diet.
- Eat organic food and drink organic beverage only, I recommend you to
- Drink organic coconut oil.
- Drink black seed oil.

## **How I beat my brain cancer and Schizophrenia permanently**

First I have question, what is schizophrenia ? schizophrenia is not real disease, it's a fake disease. It's a label, it's a diagnose.

You know that Schizophrenia have overlapping symptoms with Brain Cancer. Why ? They are one disease actually. Brain yeast or brain cancer could create schizophrenia symptoms.

If you have symptoms like auditory, visual hallucination and delusion, you would be diagnosed with schizophrenia.

## **What Cause Schizophrenia symptoms**

What cause chronic hallucination? It's not genetic it's not inheritance. Schizophrenia

symptoms are caused by yeast on brain. Yes, yeast or Cancer or Fungi.

## **Why Prescribed drug won't heal your Schizophrenia?**

That because prescribed drug never cope with nutrition deficiency problem.

## **Sign of Schizophrenia**

Here are signs of

schizophrenia :

- Hallucination and Dilution : Listening certain voices from unknown resources
- Sleep Disorder
- Anxiety and Depression

Yeast-caused Nutrition deficiency like deficiency of amino acid and deficiency of

several minerals are the root cause of Schizophrenia.

Now you know Schizophrenia is group of symptoms induced by yeast on brain.

Anyone who had experienced hallucinations have alterations in amino acids pathway believed to be associated with neurotransmitter biosynthesis and reception.

Patients with hallucinations were found to have a high glutamate with low GABA.

Schizophrenia patients' nutrition deficiency is caused by Ethanol and Acetaldehydes produced by yeast on their brain.

Yeast on their brain convert glucose into ethanol. Ethanol can convert into Acetaldehydes.

Ethanol and Acetyldehydes would deplete your amino acid, Magnesium, Zinc, vitamin B5 deposit. That would induce Schizophrenia symptoms like hallucination.

If you have yeast or Cancer on your brain, you could have psychological symptoms like schizophrenia.

## **How I Heal Schizophrenia**

Schizophrenia is also effect of brain cancer, by healing cancer, automatically you would heal your Schizophrenia.

You can eliminate Hallucinations symptoms with Inositol Niacin, well it only work temporary. It's not permanent healing.

Remember it's not genetic, it's not inheritance. And trust me there are no genetic factor in disease, it's myth.

There are two method in healing yeast which cause schizophrenia symptoms. First natural method, second surgery.

I recommend you to use natural method. Schizophrenia is yeast on brain which create several symptoms.

1. Follow strict Low Carbohydrate High Fibre diet
2. Consume virgin coconut oil or olive oil
3. Consume black seed or sesame seed

**How I beat my ADHD permanently ?**

ADHD is also effect of brain cancer, by healing cancer, automatically you would heal your ADHD.

### **What is ADHD ?**

ADHD is another fake disease, if you have symptoms like problems in paying attention (concentration), excessive activity, or difficulty controlling behavior, you'd be diagnosed with ADHD. You would be diagnosed with fake disease, ADHD it's not genetic and it's not inheritance. Drug won't heal your symptoms.

You know that ADHD have overlapping symptoms with Brain Cancer. Why ? They are one disease actually. Brain yeast or brain cancer could create ADHD symptoms.

### **What are ADHD symptoms?**

- Hyperactive-impulsive
- Difficulty in paying attention

## **What Cause ADHD?**

If you want to heal ADHD permanently, you must know the root cause of the disease.

Yeast or Cancer or Fungi is the root cause of ADHD. Just scan your brain, with MRI.

Yeast or Cancer on your Brain would create deficiency of dopamine neurotransmitter. Deficiency of Dopamine would induce symptoms like difficulty in paying attention. Dopamine deficiency.

Heavy metal toxins (Vaccine, mercury-contaminated food etc) would cause polymorphism (conversion of brain cell into yeast form) of brain cell.

## **How to heal ADHD permanently ?**

ADHD is yeast disease, just like Schizophrenia, Bipolar and all chronic psychological disorder. You could heal it permanently, but it would take time,

1. Follow strict keto diet
2. Consume coconut oil combined with olive oil
3. Consume black seed oil.

That's all ,simple right?

I will continue to use the treatment.

It is evident that the coconut oil treatment is working on cancer . The cancer seems to respond by shrinking away and clearing up.

Another thing you must note, is that the process of healing cancer is holistic, meaning it is not just a silver bullet solution that heals it (in this case a topical application).

Healing cancer is an amalgamation of different healing modalities which work to keep the body, mind, and spirit in a vibration that cancer can't thrive in. This includes a healthy diet and lifestyle, the elimination of toxins from the body, and don't forget a positive mindset.

I have been hearing from other people's personal experiences that taking certain herbs and oil was very helpful in combating their skin cancer, in conjunction with a topical application. It makes sense, since proper nutrition allows the body to heal itself.

Thank you to everyone for your willingness to read my book. It's nice to share a broad spectrum of perspectives on the matter.

Blessings, and much love,

CJ VON BRAUN

## **Bonus : How to Detox Metal toxins like Mercury ,Lead?**

### **Metal Toxins detox**

Metal toxins like mercury could induce Candida on your body. If you have heavy metal toxins on your body ( mercury, cadmium, and aluminum). I want to remind you that these heavy metal toxins would induce Candidiasis on your body. Many people do not realize that they have metal toxin on their body. Metal toxins could penetrate into your central nervous systems and bones, bio-accumulating for years and causing health problems . Fortunately, there is a simple solution that helps to chelate heavy metals so that they are no longer circulating in your body. You can chelate heavy metal toxins from your body using Cilantro and chlorella.

There are several methods, but the best method is using Cilantro and Chlorella as Chelating agents that would bind to heavy metal toxin ions, and then Cilantro and Chlorella would remove heavy metal toxins from your body through your regular excretory channels.

### **Cilantro (Chinese Parsley)**

Using Cilantro is most effective way to mobilize mercury, cadmium, lead and aluminum from your body (like in both bones and the central nervous system). Cilantro is powerfull herb in mobilizing mercury stored in your intracellular space (attached to mitochondria, tubulin,

liposomes etc) and in the nucleus of the cell (reversing DNA damage of mercury).

Because cilantro mobilizes more toxins than it can carry out of the body,

Cilantro mobilizes mercury, aluminum, lead and tin stored in the brain and in the spinal cord and moves it into the connective tissues. The mobilized mercury appears to be either excreted via the stool, the urine, or translocated into more peripheral tissues.

If you eat large salads daily full of cilantro, you would experience this effect – moodiness, terrible acne, joint pain and more. While Cilantro were mobilizing heavy metals, heavy metal toxins weren't all excreted from the body fast enough, which meant they were detoxing and toxifying themselves the same time!

Cilantro make your gallbladder to dump bile — containing the excreted neurotoxins — into your small intestine. The bile-release occurs naturally as we are eating and is much enhanced by cilantro.

Chlorella

Chlorella — The main agent used in the detoxification process is chlorella algae, which have been proven to bind with and remove toxic metals from the body. If you consume too high dose of Chlorella, you will have symptoms of nausea, heartburn, diarrhea, and headache.

That because metal toxins mercury, lead move from one part your body into another. So, if yo want to detox your body from metal toxins like Mercury, Lead. Etc, you need Cilantro and Chlorella.
